Clinical Evaluation

BIOLOGICAL CONTEXT & ADVICE

AGE

22 Yrs

BMI

20.8

HEIGHT

170cm

WEIGHT

60kg

Sonu, your BMI of 20.8 is within the healthy range, so 'weight loss' should be reframed as 'body recomposition.' With your high activity level, we will focus on reducing body fat percentage while preserving lean muscle mass through high-quality protein intake and nutrient-dense complex carbohydrates to fuel your performance.

Metabolic Limit

ENERGY TARGET

2187

DAILY RECOMMENDED KILOCALORIES

PROTEIN TARGET

120g / 480 kcal

CARBOHYDRATES

273g / 1092 kcal

HEALTHY FATS

68g / 612 kcal

Recommended Clean Foods

GEMINI MICRO-SENSITIVE COMPLIANCE

1

Quinoa: A complete plant-based protein source that provides sustained energy and essential amino acids for muscle repair.

2

Wild-Caught Salmon: Rich in Omega-3 fatty acids which reduce systemic inflammation and support metabolic efficiency.

3

Greek Yogurt (Plain, Non-fat): Provides a high concentration of casein and whey proteins to improve satiety and muscle protein synthesis.

4

Lentils: An excellent source of dietary fiber and slow-digesting carbohydrates to stabilize blood glucose levels throughout your active day.

5

Spinach and Kale: High-volume, low-calorie greens that provide micronutrients like magnesium and iron to support energy metabolism.

Meal Timings

CLINICAL HORARY PROTOCOLS

Breakfast at 7:30am, Mid-morning snack at 11:00am, Lunch at 1:30pm, Pre-workout snack at 4:30pm, Dinner at 8:00pm.

Cardio / Steps Goal

ACTIVITY ADVICE

Given your 'Very Active' status, I recommend maintaining a baseline of 12,000 steps daily. Integrate a 30-minute brisk walk at a heart rate of 120-130 bpm immediately following your evening meal to enhance insulin sensitivity and promote fat

CLINICAL EVALUATION & GUIDANCE

Sonu, your BMI of 20.8 is within the healthy range, so 'weight loss' should be reframed as 'body recomposition.' With your high activity level, we will focus on reducing body fat percentage while preserving lean muscle mass through high-quality protein intake and nutrient-dense complex carbohydrates to fuel your performance.

RECOMMENDED CLEAN FOODS

- **Quinoa:** A complete plant-based protein source that provides sustained energy and essential amino acids for muscle repair.
- **Wild-Caught Salmon:** Rich in Omega-3 fatty acids which reduce systemic inflammation and support metabolic efficiency.
- **Greek Yogurt (Plain, Non-fat):** Provides a high concentration of casein and whey proteins to improve satiety and muscle protein synthesis.
- **Lentils:** An excellent source of dietary fiber and slow-digesting carbohydrates to stabilize blood glucose levels throughout your active day.
- **Spinach and Kale:** High-volume, low-calorie greens that provide micronutrients like magnesium and iron to support energy metabolism.
- **Almonds:** Provide healthy monounsaturated fats and vitamin E, ideal for snacking to maintain hormonal balance during high-intensity training.

MEAL SCHEDULING PROTOCOL

Breakfast at 7:30am, Mid-morning snack at 11:00am, Lunch at 1:30pm, Pre-workout snack at 4:30pm, Dinner at 8:00pm.

CARDIO & PHYSICAL ACTIVITY GOALS

Given your 'Very Active' status, I recommend maintaining a baseline of 12,000 steps daily. Integrate a 30-minute brisk walk at a heart rate of 120-130 bpm immediately following your evening meal to enhance insulin sensitivity and promote fat oxidation.

11:55 PM

Hello, Sonu! It's NutriBot here. Let's take a serious look at your current trajectory.

Currently, you are at a **BMI of 20.8**, which is well within the healthy range. Your goal is weight loss, but looking at your logged intake today—**only 500 kcal**—you are severely under-fueling for your "Very Active" lifestyle. At 22 years old and highly active, dropping your intake this low will lead to muscle wasting and a metabolic slowdown rather than healthy fat loss.

Ask clinical queries, nutrition plan ideas, recipe guides, calorie estimates...
